

Database Management Systems Structured Query Language (SQL)

M. Emre Gürsoy

Assistant Professor

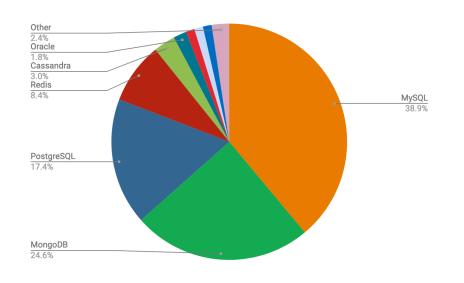

Department of Computer Engineering

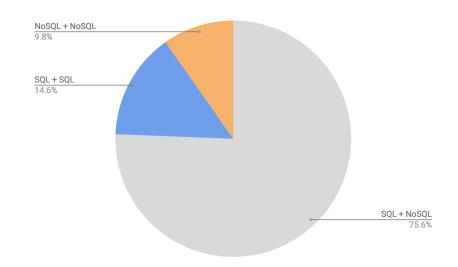

<u>www.memregursoy.com</u>

Introduction

- Pronounced as "S-Q-L" or "SeQueL"
- SQL is considered to be one of the major reasons for the commercial success of the relational data model
 - IBM, Microsoft, Oracle, ...
 - Main push from IBM in the early days (1970s)

Some Important Syntax

- CREATE DATABASE databasename;
- CREATE TABLE table_name (column1 datatype, column2 datatype, column3 datatype,

Name	Date of Birth	Gender	Zipcode	Disease
Andre	21/1/76	Male	53715	Heart Disease
Beth	13/4/86	Female	53715	Hepatitis
Carol	28/2/76	Female	53703	Brochitis
Dan	9/3/92	Male	53703	Broken Arm
Ellen	2/6/88	Female	53706	Flu
Erica	28/12/97	Female	53706	Hang Nail

- INSERT, UPDATE, DELETE
- SELECT column1, column2, ...
 FROM table_name
 WHERE condition;
- DROP TABLE table_name

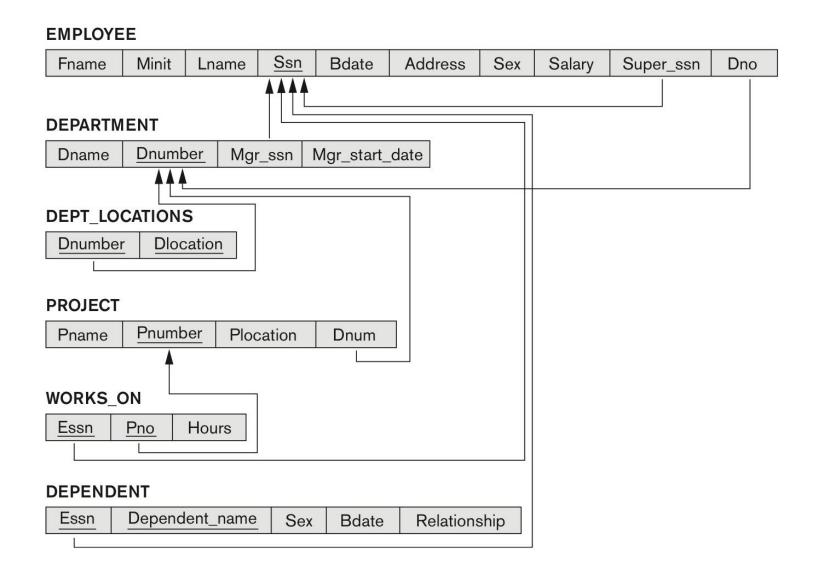

You will get hands-on experience in PS hours!

Creating Tables

- CREATE TABLE EMPLOYEE . . .
 - We have been working in "pseudo"-SQL
- Columns must have data types
 - Numeric: INTEGER, FLOAT, REAL, ...
 - String: CHAR (n), CHARACTER (n), VARCHAR (n)
 - Bit-string: BIT (n)
 - Boolean: TRUE or FALSE or NULL
 - Date: YEAR, MONTH, and DAY in the form YYYY-MM-DD
 - Timestamp: includes date and time
 - **-** ...
- UNIQUE clause: Used to represent a CANDIDATE key that was not selected as the PRIMARY key

EMPLOYEE

```

Retrieval Queries

SELECT [DISTINCT] attribute-list

FROM relation-list

WHERE condition

- attribute-list is a list of attribute names whose values are to be retrieved by the query.
- relation-list is a list of relation names (table names) required to process the query.
- condition is a boolean expression that specifies what conditions the tuples need to satisfy to be retrieved.
- DISTINCT is an optional keyword indicating duplicates should be eliminated (otherwise no duplicate elimination).

Retrieval Queries

<u>Bdate</u>	<u>Address</u>	
1965-01-09	731Fondren, Houston, TX	

<u>Fname</u>	<u>Lname</u>	<u>Address</u>
John	Smith	731 Fondren, Houston, TX
Franklin	Wong	638 Voss, Houston, TX
Ramesh	Narayan	975 Fire Oak, Humble, TX
Joyce	English	5631 Rice, Houston, TX

Query 0. Retrieve the birth date and address of the employee(s) whose name is 'John B. Smith'.

Q0: SELECT Bdate, Address

FROM EMPLOYEE

WHERE Fname='John' AND Minit='B' AND Lname='Smith';

Query 1. Retrieve the name and address of all employees who work for the 'Research' department.

Q1: SELECT Fname, Lname, Address

FROM EMPLOYEE, DEPARTMENT

WHERE Dname='Research' AND Dnumber=Dno;

Retrieval Queries

Pnumber (c) Address Bdate Dnum Lname 10 Wallace 291Berry, Bellaire, TX 1941-06-20 4 291Berry, Bellaire, TX 1941-06-20 30 Wallace 4

Query 2. For every project located in 'Stafford', list the project number, the controlling department number, and the department manager's last name, address, and birth date.

Q2: SELECT Pnumber, Dnum, Lname, Address, Bdate

FROM PROJECT, DEPARTMENT, EMPLOYEE

WHERE Dnum=Dnumber AND Mgr_ssn=Ssn AND

Plocation='Stafford';

Attribute Naming

- If attribute names are unique across the referenced relations, we can omit the relation name in the query
 - We can write Plocation = "Stafford" instead of Project.Plocation = "Stafford"
- But if there exist two attributes with the same name in different relations, we must write the relation explicitly
 - In order to prevent ambiguity
- Some people prefer to always write the relation name

Q1A: SELECT Fname, EMPLOYEE.Name, Address

FROM EMPLOYEE, DEPARTMENT

WHERE DEPARTMENT.Name='Research' AND

DEPARTMENT.Dnumber=EMPLOYEE.Dnumber;

Aliasing and Renaming

- AS: Declare alternative names for relations
 - EMPLOYEE AS E, DEPARTMENT AS D, ...
 - Keyword AS may be dropped in some SQL versions
- This strategy is sometimes used just for brevity, but sometimes it becomes "necessary"

Query 8. For each employee, retrieve the employee's first and last name and the last name of the employee's supervisor.

SELECT E.Fname, E.Lname, S.Lname

FROM EMPLOYEE **AS** E, EMPLOYEE **AS** S

WHERE E.Super_ssn=S.Ssn;

Missing "Where" Clause

- Indicates no condition on tuple selection
- Effect is a CROSS PRODUCT
 - Recall from relational algebra

Queries 9 and 10. Select all EMPLOYEE Ssns (Q9) and all combinations of EMPLOYEE Ssn and DEPARTMENT Dname (Q10) in the database.

Q9: SELECT Ssn

FROM EMPLOYEE;

Q10: SELECT Ssn, Dname

FROM EMPLOYEE, DEPARTMENT;

Use of Asterisk (*)

Retrieve all attribute values of selected tuples

Effect is "having no projection" (in linear algebra terms)

Q1C: SELECT *

FROM EMPLOYEE

WHERE Dno=5;

Q1D: SELECT *

FROM EMPLOYEE, DEPARTMENT

WHERE Dname='Research' AND Dno=Dnumber;

Q10A: SELECT '

FROM EMPLOYEE, DEPARTMENT;

DISTINCT Keyword

- SQL does not automatically eliminate duplicates
 - This is different from the default behavior of the projection operation in relational algebra
- We use the **DISTINCT** keyword to eliminate duplicates

Query 11. Retrieve the salary of every employee (Q11) and all distinct salary values (Q11A).

Q11: SELECT ALL Salary

FROM EMPLOYEE;

Q11A: SELECT DISTINCT Salary

FROM EMPLOYEE;

Set Operations

UNION, EXCEPT (difference), INTERSECT

Query 4. Make a list of all project numbers for projects that involve an employee whose last name is 'Smith', either as a worker or as a manager of the department that controls the project.

Q4A: (SELECT DISTINCT Pnumber

FROM PROJECT, DEPARTMENT, EMPLOYEE
WHERE Dnum=Dnumber AND Mar ssn=Ssn

Dnum=Dnumber AND Mgr_ssn=Ssn
AND Lname='Smith')

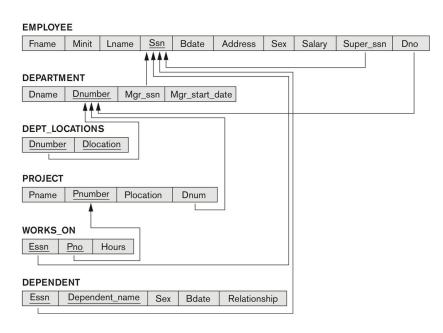

UNION

(SELECT DISTINCT Pnumber

FROM PROJECT, WORKS_ON, EMPLOYEE

WHERE Pnumber=Pno AND Essn=Ssn

AND Lname='Smith');

String Matching (LIKE)

- LIKE is a comparison operator used for string pattern matching (similar to regular expressions).
 - % means an arbitrary number of zero or more characters
 - _ (underscore) means a single character
- Examples:
 - WHERE Address LIKE '%Houston, TX%';
 - WHERE Ssn LIKE '__ 1__ 8901';

Arithmetic Operations

- Standard arithmetic operations (+, -, *, /) may be included as part of the SELECT clause.
- Show the resulting salaries if every employee working on the 'ProductX' project is given a 10 percent raise.

```
SELECT E.Fname, E.Lname, 1.1 * E.Salary AS Increased_sal FROM EMPLOYEE AS E, WORKS_ON AS W, PROJECT AS P WHERE E.Ssn=W.Essn AND W.Pno=P.Pnumber AND P.Pname='ProductX';
```

Ordering of Results

- We can add the optional ORDER BY clause in order to sort query results in a certain order.
 - ORDER BY typically comes at the end of the query
 - DESC: descending order
 - ASC: ascending order

```
SELECT <attribute list>
FROM 
[ WHERE <condition> ]
[ ORDER BY <attribute list> ];
```

ORDER BY D.Dname DESC, E.Lname ASC, E.Fname ASC

sid	name	login	age	gpa
53666	Jones	jones@cs	18	3.4
53688	Shero	shero@cs	18	3.2
53650	Shero	shero@math	19	3.8

Find all students with age 18

SELECT *
FROM Students S
WHERE S.age=18

sid	name	login	age	gpa
53666	Jones	jones@cs	18	3.4
53688	Shero	shero@cs	18	3.2

53688	Shero	shero@cs	18	3.2
53650	Shero	shero@math	19	3.8

Names and logins of all students with age 18

SELECT S.name, S.login FROM Students S WHERE S.age=18

name	login
Jones	jones@cs
Shero	shero@cs

Enrolled

sid	cid	grade
53831	Carnatic101	C
53831	Reggae203	В
53650	Topology112	A
53666	History105	В

Students

sid	name	login	age	gpa
53666	Jones	jones@cs	18	3.4
53688	Shero	shero@cs	18	3.2
53650	Shero	shero@math	19	3.8

Names and cids of students who received A from one or more of their courses SELECT S.name, E.cid FROM Students S, Enrolled E WHERE S.sid=E.sid AND E.grade="A"

S.name	E.cid
Shero	Topology112

Insertion

- **INSERT**: add one or more tuples into a relation
 - INSERT INTO <table_name> VALUES (...)
 - Attribute order should be same as CREATE TABLE
 - Constraints wrt data types (INT, CHAR, ..) and integrity (related to PK, FK, ..) are enforced

```
U1: INSERT INTO EMPLOYEE

VALUES ('Richard', 'K', 'Marini', '653298653', '1962-12-30', '98

Oak Forest, Katy, TX', 'M', 37000, '653298653', 4 );
```

(Fname	VARCHAR(15)	NOT NULL,
Minit	CHAR,	NOT NOLL,
Lname	VARCHAR(15)	NOT NULL,
Ssn	CHAR(9)	NOT NULL,
Bdate	DATE,	
Address	VARCHAR(30),	
Sex	CHAR,	
Salary	DECIMAL(10,2),	
Super_ssn	CHAR(9),	
Dno	INT	NOT NULL,
PRIMARY KEY (Ssn),		

Deletion

- **DELETE**: remove tuples from a relation
 - DELETE FROM <table_name> WHERE (...)
 - The WHERE clause indicates the condition regarding which tuples will be deleted

U4A: DELETE FROM EMPLOYEE

WHERE Lname='Brown';

U4B: DELETE FROM EMPLOYEE

WHERE Ssn='123456789';

U4C: DELETE FROM EMPLOYEE

WHERE Dno=5;

U4D: DELETE FROM EMPLOYEE;

Update

- **UPDATE**: modify attribute values of tuples
 - UPDATE <table_name> SET <changes> WHERE (...)

Change the location and controlling department number of project #10 to

"Bellaire" and 5, respectively.

UPDATE PROJECT

SET PLOCATION = 'Bellaire',

DNUM = 5

WHERE PNUMBER=10

Give all employees in the "Research" department a 10% raise in salary.

UPDATE EMPLOYEE

SET SALARY = SALARY *1.1

WHERE DNO IN (SELECT DNUMBER

FROM DEPARTMENT

WHERE DNAME='Research')

INSERT INTO VALUES

Students

(53688, 'Smith', 'smith@ee', 18, 3.2)

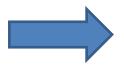

sid	name	login	age	gpa
53666	Jones	jones@cs	18	3.4
53688	Smith	smith@ee	18	3.2

DELETE

FROM Students S

WHERE S.name = 'Jones'

DROP TABLE Students

Destroy the Students relation. Schema and tuples are deleted.

- Consider the following schema:
 - Sailors (sid, sname, rating, age)
 - Boats (bid, bname, color)
 - Reserves (sid, bid, day)

Sailors

sid	sname	rating	age
22	dustin	7	45.0
31	lubber	8	55.5
58	rusty	10	35.0

Boats

bid	bname	color
101	Interlake	Blue
102	Interlake	Red
103	Clipper	Green
104	Marine	Red

Reserves

sid	bid	day
22	101	10/10/96
58	103	11/12/96

- Sailors (<u>sid</u>, sname, rating, age)
- Boats (bid, bname, color)
- Reserves (sid, bid, day)
- Find the names of sailors who reserved boat number 103.

```
SELECT sname
FROM Sailors, Reserves
WHERE Sailors, sid=Reserves, sid AND bid=103
```

```
SELECT S.sname
FROM Sailors S, Reserves R
WHERE S.sid=R.sid AND R.bid=103
```

- Sailors (<u>sid</u>, sname, rating, age)
- Boats (bid, bname, color)
- Reserves (sid, bid, day)
- For sailors whose names begin and end with letter B and contain at least three characters, display their name and twice their age.

SELECT S.sname, 2*S.age

FROM Sailors S

WHERE S.sname LIKE 'B_%B'

- Sailors (sid, sname, rating, age)
- Boats (bid, bname, color)
- Reserves (sid, bid, day)
- Find the IDs of sailors who have reserved a red boat or a green boat.

SELECT R.sid FROM Boats B, Reserves R WHERE R.bid=B.bid AND (B.color='red' OR B.color='green') SELECT R.sid FROM Boats B, Reserves R WHERE R.bid=B.bid AND B.color='red'

UNION

SELECT R.sid FROM Boats B, Reserves R WHERE R.bid=B.bid AND B.color='green'

- Sailors (sid, sname, rating, age)
- Boats (bid, bname, color)
- Reserves (sid, bid, day)
- Find the IDs of sailors who have reserved a red boat but never reserved a green boat.

```
SELECT R.sid
FROM Boats B, Reserves R
WHERE R.bid=B.bid
AND B.color='red'
EXCEPT
SELECT R.sid
FROM Boats B, Reserves R
WHERE R.bid=B.bid
AND B.color='green'
```

- Sailors (sid, sname, rating, age)
- Boats (bid, bname, color)
- Reserves (sid, bid, day)
- Find the IDs of sailors who have reserved a red boat and a green boat.

```
SELECT R.sid
FROM Boats B, Reserves R
WHERE R.bid=B.bid
AND B.color='red'
INTERSECT
SELECT R.sid
FROM Boats B, Reserves R
WHERE R.bid=B.bid
AND B.color='green'
```

SELECT R1.sid
FROM Boats B1, Reserves R1,
Boats B2, Reserves R2
WHERE R1.sid = R2.sid AND
R1.bid=B1.bid AND R2.bid=B2.bid
AND (B1.color='red' AND B2.color='green')

Conclusion

- SQL is a comprehensive language for relational database management (insert, select, modify, delete, ...)
- So far, we covered fundamental SQL commands
 - Many advanced aspects and functionalities exist (we will cover some more, but not all)
- Next topic: Advanced SQL
 - Nested SQL queries
 - IN, EXISTS, NOT EXISTS, ...
 - GROUP BY HAVING
 - Aggregates: COUNT, SUM, MIN, MAX, ...
